DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show the opening (15d) as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, the phrases "or the like" and "in particular" render the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al. (5,813,380). Takahashi et al. discloses a bearing device for rotatably receiving a control element in media carrying conduits of an ICE with bearing receiving means (see fig. 23) characterized in that the bearing receiving means can be connected by way of a partially elastic connecting element (22d), said bearing receiving means and said connecting element are made in one piece and the bearing unit is in the configuration of a C-shaped profile. Said bearing unit has a flow wall (4), having an opening (see fig. 1), said flow wall extending inclinedly to the direction of flow of the media flowing therethrough. Takahashi et al. further discloses the bearing unit having a sealing edge (400).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
